

Project Executable Files

Date	04-07-2026
Team ID	
Project Name	Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted No / NA)	(Yes	
1	Complete source code (all files and folders)	Yes		
2	README / Set up Guide (instructions to run the project)	Yes		
3	requirements.txt / package.json / dependency file	Yes		
4	Database schema / seed files (if applicable)	NA		
5	Environment configuration file (.env.example similar)	or NA		
6	Deployed application URL (if hosted)	Yes https://opti crop-smart-agriculture.streamlit.app/		
7	APK / Executable binary (if applicable for mobile/ desktop apps)	NA		

8	Docker file / Containerization config (if applicable)	NA		
9	Test files and test results	Yes		
10	Demo video or walk through (if required)	No		

SMARTBRIDGE
Let's Bridge the Gap

SKILL
WALLET
A SmartBridge Product

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Opt i Crop- Smart - Agri cul t ure/

app.py

model.py

crop_model.pkl

crop_data.csv

requirements.txt

README.md

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://opticrop-smart-agriculture.streamlit.app/
Login Credentials (Demo)	Public access
Platform / Hosting Provider	Streamlit community cloud
Repository Link	https://github.com/ramyareddy69038-maker/Opt i Crop- Smart - Agri cul t ure
Demo Video Link	NA

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install Python 3.10 or later.

2. Download or clone the project files

3. Open the project folder in command prompt or Terminal

4. Install the required dependence:

```
pip install -r requirements.txt
```

5. Start the Streamlit application

```
streamlit run app.py*
```

6. Open the URL displayed in the terminal (usually <http://localhost:8501> ) in your web browser.

7. Enter the required agricultural parameters and click Predict to get the crop recommendation and production optimization results.

Pre-requisites

Python 3.10 or above

Streamlit

Pandas

NumPy

SciKit-Learn

Joblib

Internet connection (for hosted version)

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and correctness of user input.	Users should provide accurate soil and environmental parameters.
2	The model supports only the crops included in the training dataset	More crop datasets can be added in future versions to improve coverage.
3	Internet connection is required to access the hosted Streamlit application	Run the application locally using <code>streamlit run app.py</code> if internet is unavailable.
